## HIGH TECHNOLOGY & MAXIMUM BREATHING COMFORT WITH SCUBAPRO REGULATORS

### SCUBAPRO FIRST STAGE REGULATORS

First stage regulators are divided into piston & diaphragm categories.

### SCUBAPRO PISTON TECHNOLOGY

The general advantage of a piston first stage lies in its reliability & reduced maintenance requirements. More importantly, no other design can reach the high air delivery rate of a balanced piston controlled first stage. First stages with air-balanced pistons deliver significantly more air to the second stage than any other first stage. This technology is featured in our MK25 EVO first stages.

Classic downstream piston - The classic downstream valve is the first choice of diving centers & rental facilities worldwide for warm & moderate water temperatures. This technology is featured in our MK2 EVO first stage.

### • SCUBAPRO DIAPHRAGM TECHNOLOGY

Diaphragm-based first stages are environmentally sealed so water cannot enter the inner mechanism. Diaphragm first stages have been the favored choice of cold water divers & those working in contaminated or muddy water. This technology is featured in our MK19 EVO, MK17 EVO 2 & MK11 EVO first stages.

### • SCUBAPRO SECOND STAGE REGULATORS

A high quality second stage can significantly reduce stress & enhance diver safety by providing a smooth, low-effort breathing response, resulting in ample yet controllable quantities of air.

### • AIR-BALANCED VALVE TECHNOLOGY

The air-balanced valve technology of SCUBAPRO second stages features a balancing chamber in the second stage mechanism, slightly offsetting the force of the downstream air entering from the first stage. Air-balanced valve technology is featured in X-Series, S-Series & G-Series second stages. For best results, they should be teamed with balanced first stages like the MK25 EVO or MK17 EVO 2.

## B-KOOL PURIFICATION

The B-KOOL refrigeration dryer from BAUER considerably reduces the running costs of the compressor whilst protecting the environment at the same time.

At locations with particularly high ambient temperatures, B-KOOL assures a remarkably longer life time of the filter cartridge. You will benefit from a lower cost of purchase & storage of filter cartridges, a longer uninterrupted compressor operation & a lower consumption of filter cartridges.

- 200 - 680 l/min
- 100 - 350bar
- Up to 11 times longer life for your filter cartridges!
- Environmentally sound
- Integrated or as stand-alone version
- Easy to retrofit

## BAUER PureAir Certification

"PureAir – Safe Diving": High quality breathing air is the most important element of your diving equipment. Insufficiently or even non-filtered air from the compressor may jeopardize the health & even the life of any sports diver. The **BAUER PureAir Campaign** offers any diver an easy to use guide for selecting trustworthy filling stations. By choosing to use **BAUER** state-of-the-art technology diving centers are able to meet the highest standards of Air Quality & are recognized with the award of the **BAUER Pure Air Seal**.

The exclusive **BAUER PureAir Seal** guarantees any diver that he or she really receives only the purest breathing air. Learn more at [www.bauerpureair.com/diving](http://www.bauerpureair.com/diving)
