HIGH TECHNOLOGY & MAXIMUM BREATHING COMFORT WITH SCUBAPRO REGULATORS

SCUBAPRO FIRST STAGE REGULATORS

First stage regulators are divided into piston & diaphragm categories.

SCUBAPRO PISTON TECHNOLOGY

The general advantage of a piston first stage lies in its reliability & reduced maintenance requirements. More importantly, no other design can reach the high air delivery rate of a balanced piston controlled first stage. First stages with air-balanced pistons deliver significantly more air to the second stage than any other first stage. This technology is featured in our MK25 EVO first stages.

Classic downstream piston - The classic downstream valve is the first choice of diving centers & rental facilities worldwide for warm & moderate water temperatures. This technology is featured in our MK2 EVO first stage.

• SCUBAPRO DIAPHRAGM TECHNOLOGY

Diaphragm-based first stages are environmentally sealed so water cannot enter the inner mechanism. Diaphragm first stages have been the favored choice of cold water divers & those working in contaminated or muddy water. This technology is featured in our MK19 EVO, MK17 EVO 2 & MK11 EVO first stages.

• SCUBAPRO SECOND STAGE REGULATORS

A high quality second stage can significantly reduce stress & enhance diver safety by providing a smooth, low-effort breathing response, resulting in ample yet controllable quantities of air.

• AIR-BALANCED VALVE TECHNOLOGY

The air-balanced valve technology of SCUBAPRO second stages features a balancing chamber in the second stage mechanism, slightly offsetting the force of the downstream air entering from the first stage. Air-balanced valve technology is featured in X-Series, S-Series & G-Series second stages. For best results, they should be teamed with balanced first stages like the MK25 EVO or MK17 EVO 2.
